Formulation Spotlight NuLastic Soft Sunscreen Gel SPF 30

*Unlike many other silicone elastomers on the market, **NuLastic Soft** elastomers form crystal clear gels with organic sunscreens. With isododecane as the carrier solvent, this elastomer gel goes on smooth and leaves your skin feeling dry to the touch.*

Bernel Ester DCM is a lightweight, naturally derived ester with excellent powder sunscreen solvency. It's a great, less shiny alternative to fully-synthetic sunscreen emollients

NuLastic Soft ID-6 is a silicone elastomer in a volatile carrier for soft feel and soft-focus effect. It's compatible with a wide range of emollients and is able to make crystal clear gels with sunscreens.
